Co-Mining® Technology

The Invention of the «Electronic Co-Decider», with Co-Mining® inside, implements the decision know how of operators facing complexity of the world. Decider.Track ("namely "dt") computes security laws to back track human decision evolutions within the risk limits of reality interpretation. "dt" has perception abilities, piloted by awareness commands, which deciphers and thwarts, in the planetary cyberspace, at the speed of light, the risks of human subjectivity and of manipulated disinformation produced by opaque emitters (terrorists, hidden influence strategies, media, the market,...)

dt: your revolutionary "decisional co-pilot" which makes visible for you what is invisible, which, rapidly and efficiently, identifies the threats, determines the cornerstone of the attacks and advocates the operational responses to produce. dt tracks for you, days and nights, weeks and months, in a collective approach and with coordination between Intelligence Services, national and trans national, intra and inter corporate, the best opportunities and monitors for you, the optimal time to act

History of d.t

With more than 150 Man-Years of civil and military industrial R&D in advanced Cognitive Sciences, the Co-Mining[®] technology inside "dt", is an internationally patented EUROPEAN TECHNOLOGICAL BREAKTHROUGH for decisional systems.

The inventor of the technology, Dr Martine Naillon, acting as Chairman and CEO, PhD in Mathematics applied to Neurosciences, MBA, specialist in Military Intelligence and leader in biological Artificial Intelligence, coming from large industrial groups, has funded the early stage developments during last 7 years.

"dt" is born from a synergy between Mathematics, Biology and Human Sciences: It is the first "ELECTRONIC NEUROTRANSMITTER" which flies from one brain to another brain to build collective decisions for humans.

Subjectivity of reality

When "dt" perceives live information in the world, it must distinguish the multiple facets of reality. Truth is deformed by subjective interpretation and could be hidden, voluntarily or accidentally, behind the message of the media which communicates about it. Consequently, even though truth is accessible, humans could ignore it, falling into irrational behaviours (as in the financial markets or facing terrorism or hidden influence strategies...). "dt" makes visible what is invisible, as it has the ability to detect the human COGNITIVE BIAS.

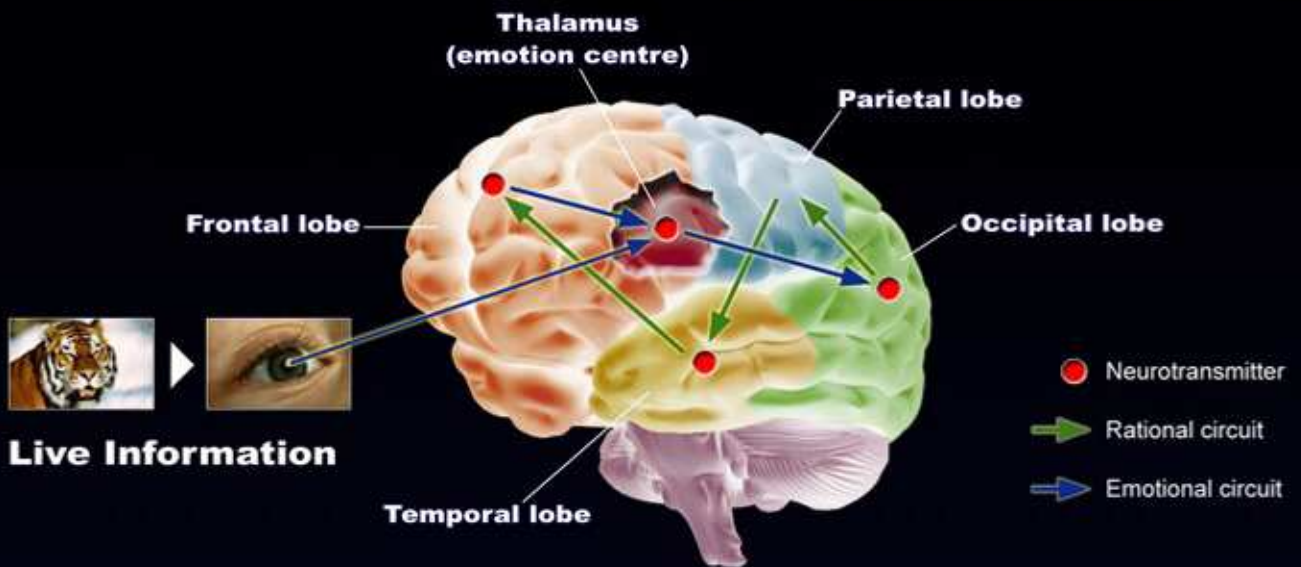

The information, not only subjective, is global. To grasp this global dimension, "dt" processes information through cooperative artificial agents distributed all around the planet.

Your favourite "co-pilote"

To navigate in this fuzzy subjective world, you need to have your "co-decider" which brings you back to objectivity and maintain your decisions in the risk limits as an aircraft electronic co-pilot. Your "co-decider" tracks for you the decision roadmaps, during days and nights, monitoring the complete cycle AWR: ALERT, WARNING and RESPONSE. With it, you will not miss any opportunity and will anticipate the threats in the Financial markets, in Economic Intelligence, in Strategic and Business Intelligence and in all domains of civil and military security.

Brain-like individual processing

IKM detail (one brain)

Decision-agent = frontal lobe (situation assessment)

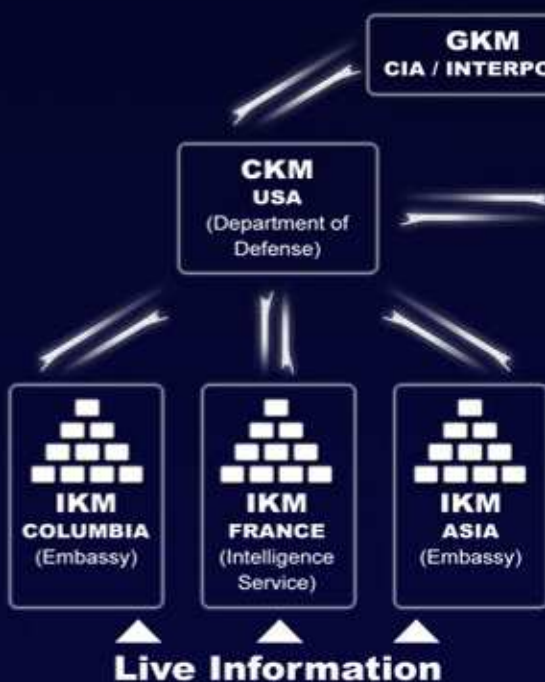

Recognition-agents = temporal lobe (pattern recognition)

Context-agents = parietal lobe (press, analyst)

Sensors = occipital lobe (data mining tools)

Electronic neurotransmitter = PDO® (patented core technology)

Global cooperative processing

GKM: Group Knowledge Manager (Transnational cooperation)

CKM: Collective Knowledge Manager (Intraministerial cooperation)

IKM: Individual Knowledge Manager - one brain (Individual processing)

PDO®: Portable Distributed Objects = Planetary trackers

PDO® flow (Neurotransmission extrapolation) :
